

XR (延展實景) 安

Practical applications o Safety Training System

創新訓練模式

Innovative Training Module

中國港灣是香港首間實際應用延展實景於安全訓練系統的工程公司。延展實景是虛擬實境、擴增實境、混合實境的統稱。本公司除一般實體培訓，包括：入職訓練、早操、危害識別活動、工具箱講座及預防意外的分享以外，為各項目部員工提供多一項延展實景安全訓練選擇。延展實境可讓員工親身參與訓練，加深他們對訓練的記憶，而達到更好的訓練效果。

China Harbour Engineering Company Limited(CHEC) is the first construction company in Hong Kong applied the Extended Reality safety training system. Extended Reality is a general term for Virtual, Augmented, and Mixed reality. In addition to routine safety training, this includes: Induction Specific Training, Site Daily Cycle, Hazard Identification Activity, Toolbox Talk and Lesson Learn, CHEC provides employees from projects with one more option for Extended Reality safety training. The Extended Reality allows the employees to participate in hands-on experience, strengthen the impression of the training, and achieve better training effect.

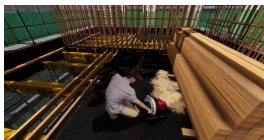

系統包括多個訓練套件，包括高空工作(金屬棚架應用)、樓面釘板、機電安裝等，使用時可以選擇合適的套件給不同工種的員工。

如果員工沒有採取正確的安全步驟，就會體驗到虛擬的意外場景，令員工的學習過程更深刻。

The current system has several training scenarios, such as working at heights (use of metal scaffolding), framework, electrical and mechanical installation, etc. You can choose suitable scenarios for employees on different trades of work.

If employees do not take the correct safety steps, they will experience virtual unexpected scenarios, which can deepen the learning process of employees.
